QUANTUM BUSINESS SOLUTIONS, LLC

Information Security Overview

Prepared for client vendor assessments

Version: 1.0 | **Effective:** November 3, 2026 | **Owner:** Shawn Peterson, Chief Executive Officer | **Review cycle:** at least annually

1. Purpose and how to read this document

This overview describes how Quantum Business Solutions, LLC ("**Quantum**") protects the information our clients entrust to us. It is written for client security, compliance and procurement teams performing a vendor assessment.

Our assurance position, stated plainly. Quantum is not currently SOC 2 or ISO 27001 certified. We do not claim to be. In place of an independent audit report, this document, our Data Processing Agreement, and the evidence listed in Section 15 are intended to give your team what it needs to assess our risk. The platform layer where most client data lives (for example HubSpot) is covered by that provider's own independent SOC 2 Type II report, available through its Trust Center. We are glad to answer follow-up questions.

This document is informational. It describes Quantum's practices as of its effective date, to the best of Quantum's knowledge, and is not a warranty or a guarantee that no security incident will occur. Quantum may improve or change its controls over time without reducing the overall level of protection. Binding commitments are in the signed Data Processing Agreement, Master Services Agreement or Terms, and any statement of work. For any claim, Quantum's liability is limited to the maximum limit of its applicable insurance policy, as set out in the Data Processing Agreement.

2. About Quantum and our role

Quantum Business Solutions, LLC is a South Dakota-based consulting and implementation firm (1809 West Parkwood Circle, Sioux Falls, SD 57108) that helps clients design, build and operate their CRM, marketing, sales and service systems and the processes around them.

In most engagements Quantum works **inside systems the client owns and licenses**, such as the client's own HubSpot portal and website. The client remains the owner and controller of its data. Quantum acts as a service provider and processes data only to perform the agreed services. Where practical we leave data in the client's systems instead of copying it elsewhere.

3. Information we handle

- **CRM and marketing data:** contact, company, deal and activity records; lists; email and campaign data.
- **Documents:** proposals, contracts, statements of work, reports, and files shared with us for the engagement.
- **Process knowledge:** standard operating procedures, workflows, playbooks, configuration details and training material.

- **Access credentials and tokens** needed to work in client systems (see Section 5).

We do not intentionally collect or process payment card numbers, Social Security numbers, government ID numbers, bank account credentials, or protected health information. If an engagement requires any of these, we will agree additional safeguards in writing before the data is shared.

4. Control summary

The table below summarizes controls in place today. Anything not yet in place is labeled as such.

Area	Control	Status
Multi-factor authentication	Required on email, CRM, file storage, and other business-critical accounts for all team members and contractors.	In place
Single sign-on	Used where supported by the platform; being extended to remaining systems.	In place (partial)
Passwords	Strong, unique passwords; team members are expected to rotate passwords about every 180 days, and immediately on suspected compromise or personnel change (Section 5).	In place
Email security	Inbound spam, phishing and malware filtering on company email.	In place
Backups	Regular backups of Quantum's business-critical systems. For client data, backups depend on the client's platform and the engagement (Section 8).	In place
Security training	Security awareness training required for all employees and contractors at onboarding and at least annually, with a signed acknowledgment.	Formal rollout in progress
Confidentiality agreements	Written confidentiality, IP and non-solicitation agreement signed by every employee and contractor before access.	Required of all personnel
Least-privilege access	Role-based access; access reviewed at least quarterly; prompt removal (no later than the next business day) at offboarding.	In place
Incident response	Documented process; client notification within 72 hours of confirming an incident affecting client data.	In place
Professional liability insurance	Technology professional liability (errors and omissions) coverage for Quantum's consulting and implementation services. Certificate available on request.	In place
Cyber liability coverage	Network security and privacy liability coverage (including unauthorized access, transmission of malicious code, and disclosure of personal or third-party confidential information) and media liability coverage, plus data breach expense and regulatory defense coverage of up to $1,000,000 per policy period, provided by endorsements to Quantum's technology professional liability policy.	In place
Third-party audit report	SOC 2 / ISO 27001 for Quantum.	Not held

5. Access control and authentication

- **Unique accounts.** Every person uses a named account. Shared logins are prohibited.

- **Multi-factor authentication (MFA)** is required for all business-critical systems. Authenticator-app or hardware-key MFA is preferred over SMS.
- **Single sign-on (SSO)** is used where a system supports it and it is practical to deploy.
- **Password policy.** Team members are expected to use a password manager with unique, randomly generated passwords. Passwords for any system not protected by SSO and MFA are expected to be rotated about every 180 days, and any credential is rotated immediately upon suspected compromise, role change or departure.
- **Least privilege.** Access is granted by role and by client. Team members can reach a client's environment only if they work on that engagement.
- **Client-granted access.** Where a client grants Quantum access to its systems (for example as a HubSpot partner or user), we ask that access be provisioned with the minimum permissions needed and revoked at the end of the engagement. We will not retain or share client credentials.
- **Access reviews and offboarding.** Access is reviewed at least quarterly. When someone leaves or an engagement ends, their access is removed promptly, and no later than the next business day.

6. Email, device and network security

- Inbound email is filtered for spam, phishing and malware.
- Team devices used for client work are required to have full-disk encryption, automatic screen lock, current operating-system and browser updates, and endpoint protection.
- Client data may not be stored on personal removable media or in personal cloud accounts.
- Public Wi-Fi may be used only with MFA-protected accounts and encrypted (HTTPS/VPN) connections.

7. Data protection

- **Encryption in transit:** TLS 1.2 or higher for connections to our systems and our providers' systems.
- **Encryption at rest:** provided by our storage and platform providers (AES-256 or equivalent) for the services listed in our subprocessor list.
- **Client separation:** client data is kept logically separate by client. We do not mix one client's data with another's or use it for any other client.
- **Minimization and retention:** we keep only what an engagement requires. At the end of an engagement, client data is returned or deleted as set out in the Data Processing Agreement.

8. Backups and continuity

- Quantum backs up its business-critical systems regularly. Backups of client data depend on the client's platform and the engagement, and most client data stays in the client's own systems.
- Restoration is tested at least annually.

- Because most client data remains in the client's own platform, a Quantum outage does not by itself cause loss of client data. We maintain a contact list and alternate-communication plan for incidents affecting our email or collaboration tools.

9. People: training, agreements and contractors

- **Security awareness training** is required for every employee and contractor at onboarding and at least annually. It covers phishing, password and MFA hygiene, handling client data, safe use of AI tools, and how to report an incident. Quantum is putting formal tracking in place, and each team member signs a written acknowledgment that they have completed it.
- **Written agreements.** Every employee and contractor signs a confidentiality, intellectual property and non-solicitation agreement before receiving access to client or Quantum information.
- **Contractors** are held to the same security, confidentiality and access rules as employees, and are covered by the same training and offboarding.
- **Reporting.** Team members must report any suspected security incident or loss of a device immediately.

10. Vendors and subprocessors

We use a limited number of third-party services to deliver our work. We review a provider's security posture (for example its SOC 2 report or Trust Center, encryption, and data-processing terms) before we use it with client data, and we list the providers that may process client data in Exhibit C of the Data Processing Agreement. We give clients advance notice of material changes.

11. Use of AI tools

Quantum uses AI-assisted tools to improve the speed and quality of its work.

- Only company-approved AI tools operating under business or enterprise terms are used with client information.
- Credentials, secrets and regulated data (see Section 3) are never entered into AI tools.
- A human reviews AI-assisted work product before it is delivered to a client.

12. Incident response and notification

Quantum maintains an incident response process: detect, contain, investigate, remediate and review.

- We will notify the affected client **without undue delay and in any case within 72 hours** after confirming an incident that affects the client's data.
- Notice will describe, as far as known, what happened, what data and systems were involved, what we have done, and what the client should do.
- We will cooperate with the client's investigation and any required regulatory or customer notifications, and we will give a written summary and corrective actions after resolution.
- Quantum's insurance includes breach-response support (forensic investigation, legally required notification and credit monitoring), which we will use where applicable.

Security contact: Shawn Peterson, shawn@thequantumleap.business.

13. Intellectual property and confidentiality

Quantum's methodologies, templates, frameworks, automations and tooling are protected as confidential and proprietary. Each team member is bound by written confidentiality and IP terms, and client-facing agreements restrict use and disclosure of Quantum's materials. Clients retain ownership of their own data and content.

14. Governance and continuous improvement

- The CEO owns information security at Quantum and approves this document.
- Policies (access control, acceptable use, incident response, vendor management, data retention) are reviewed at least annually and after any significant incident or change.

15. Evidence available on request

To support your vendor assessment, we can provide:

- Signed Data Processing Agreement and Mutual Non-Disclosure Agreement.
- Subprocessor list and links to each provider's trust or security page (including HubSpot's Trust Center and SOC 2 Type II report).
- Certificate of insurance showing Quantum's technology professional liability (E&O) coverage and its cyber (network security, privacy and data breach) endorsements.
